

ICE Section meeting
September 15th, 2010

Beam-Beam tune shift and long range interactions observations.

Emanuele Lface

Head-on tune shift measurements.

May 2nd and 3rd, 2010

Conditions

- 2 bunches per beam, one collision per IP.
- 10^{11} protons per bunch.
- End of fill measurements.

	Beam 1		Beam 2	
	Bunch 1	Bunch 2	Bunch 1	Bunch2
Bucket	1	17851	1	8911
Number of collisions	3	1	2	2

Two frequencies for B1, one bunch is making 3 collisions and the other 1, different BB tune shift?

Q'y = ???

Estimate of tune-shift

$$\Delta Q = \frac{1}{4\pi} r_p \frac{N_p}{\epsilon_n}$$

In this fill, the emittance and charge per bunch (**for B1** that acts on B2) are:

$$\epsilon_n \approx 3 \cdot 10^{-6}, \quad N \approx 0.7 \cdot 10^{11}$$

$$\Delta Q \approx -2.8 \cdot 10^{-3}$$

and **for B2** that acts on B1 are:

$$\epsilon_n \approx 7 \cdot 10^{-6}, \quad N \approx 0.7 \cdot 10^{11}$$

$$\Delta Q \approx -1.22 \cdot 10^{-3}$$

for B1 one bunch see 3 encounters and the other bunch 1, so the difference in tune is:

$$2\Delta Q \approx -2.44 \cdot 10^{-3}$$

Long range measurements.

September 10th, 2010

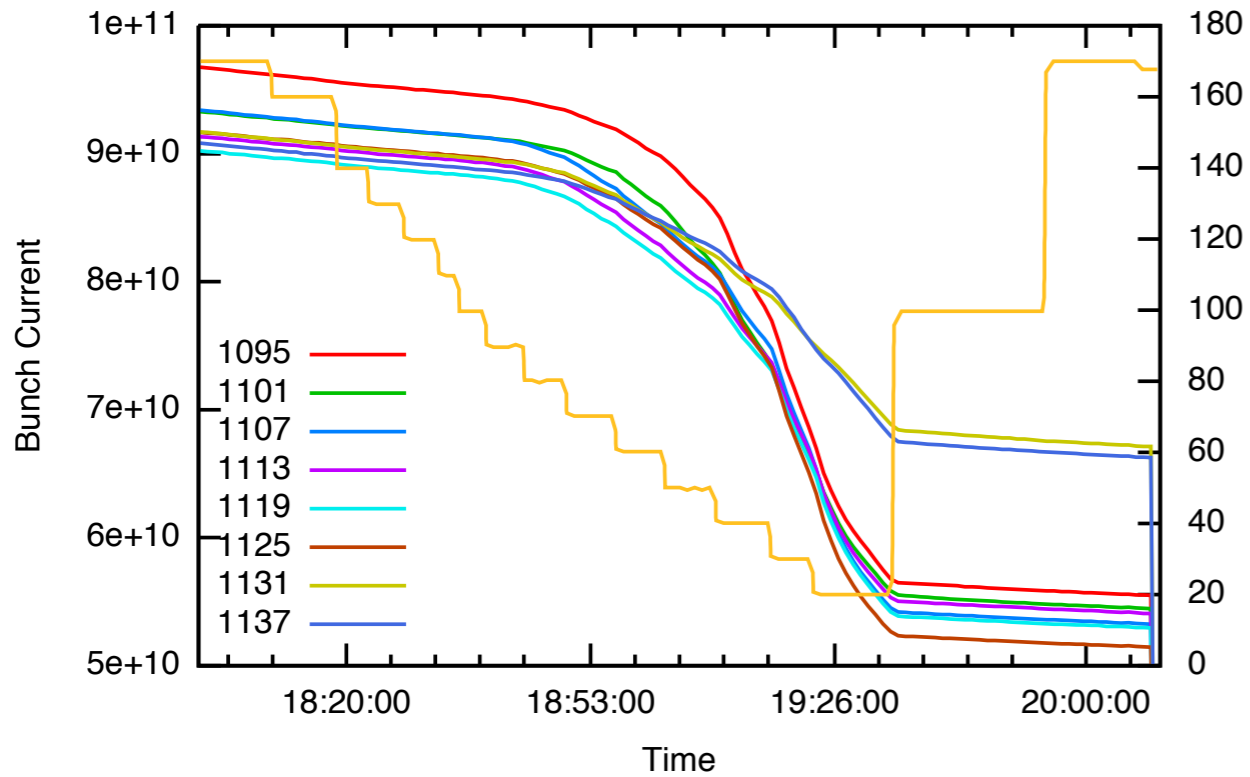

Conditions

- 28 bunches per beam, in 4 trains of 150 ns.
- 1 train of 4 bunches and 3 trains of 8 bunches.
- 10^{11} protons per bunch at injection energy.
- 4 to 20 collisions per bunch.
- Parallel separation $> 3 \sigma$ (at nominal emittance).
- Initial crossing angle of $170 \mu\text{rad}$ ($\sim 14 \sigma$).

Beam 2

Transversal beam size

There is a clear evidence of the beam-
beam effect in the LHC
(ok, not a big surprise).

There is a clear evidence of the beam-beam effect in the LHC
(ok, not a big surprise).

A quantitative analysis is going on: in particular it is interesting to find the correlation between the number of parasitic encounters and the lifetime.

There is a clear evidence of the beam-beam effect in the LHC (ok, not a big surprise).

A quantitative analysis is going on: in particular it is interesting to find the correlation between the number of parasitic encounters and the lifetime.

If we want to give numbers, it is of capital importance to have the single bunch instrumentation (for the tune, the beam size etc.).

A consideration
